SMART SOLUTIONS

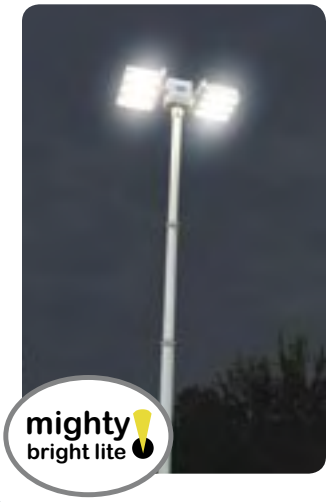
Light Towers, Telescoping Masts and D-TEC II Safety Systems for Mobile Command Centers

MOBILE COMMAND
CENTER EXPERTS

Count on Will-Burt for Smart Solutions.

When it comes to creating your Mobile Command Center, Will-Burt builds in versatility, flexibility and dedication to quality to ensure you're able to do the same, response after response. It's no wonder professionals just like you have turned to Will-Burt for more than 20 years.

Will-Burt can put together a mobile command center package that integrates scene lighting, communications equipment, surveillance systems and weather stations. For added protection, the D-TEC II provides the security you need when extending a Will-Burt system.



Lighting

Choose Night Scan® Light Towers with telescoping lighting systems configured to meet the needs of your operations. Dual tilting lights focus on the job, internal wiring maintains a clean appearance and heights to 42 feet combined with up to 9,000 watts of light for full scene coverage. Panel mount controls, hand-held remote controls and compact units that extend fully with lights – just some of the benefits of specifying a Will-Burt Night Scan Light Tower.

The Night Scan line includes the Chief, Powerlite®, Profiler and Vertical Towers.

Communications

In any situation that requires command and control, Will-Burt telescoping masts will support payloads necessary for operations communications. The Will-Burt line includes pneumatic Standard Duty and Heavy Duty Non-Locking Masts. Payloads will elevate to the proper extended height easily and quickly, making Will-Burt masts ideal for elevating antennas and microwave equipment. Will-Burt's mast accessory line includes antenna stubs, mast rotators and antenna positioners.

Choose from Standard Duty, Heavy Duty or custom designed masts.

Visit Willburt.com/mobilecommandcenter.asp for more information and specifications regarding your Mobile Command Center application.

Surveillance

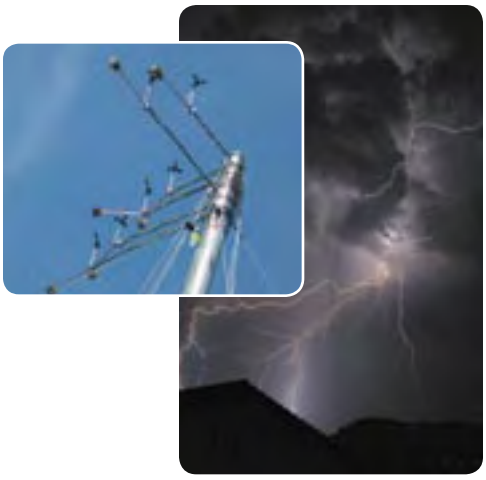
The need for surveillance equipment is paramount in a Mobile Command Center. Will-Burt offers fully integrated camera mast systems. Whether your application calls for a complete camera mast system or a telescoping mast with accessories, Will-Burt can help you create the system of your choice. Let Will-Burt choose a mast and camera system so you can minimize your risk and maximize your operations.

For safety and security specify a Will-Burt integrated camera mast system.

Weather Stations

Because disaster response time is critical, the ability to deploy a weather station quickly and reliably is essential. Will-Burt telescoping pneumatic masts are perfect for elevating environmental equipment. Choose your mast height necessary for the terrain and select the mast weight capacity required for the weather station.

Proper environmental management requires the usage of a mast and weather station.



Telescoping Safety Mast Safety System

The D-TEC II Safety System provides AC field detection, object proximity detection, tilt sensor detection and above the mast illumination. Ideal for placement atop every light tower and mast, the D-TEC II will provide added security when on scene.

D-TEC II

The latest in detection technology from Will-Burt.

When payload, deployment and reliability are critical, Will-Burt light towers and telescoping masts are the answer.
